- 12:05-12:50 – Speaker Presentation
- 1:00 - Adjourn

Luncheon Topic Overview

Are Application Backdoors Placing Your Organization At Risk?

Synopsis

Application vulnerabilities are real and hackers are targeting industries that offer the best avenues for illicit monetary gains. Yet economic pressures are driving your enterprises to use third-party COTS, open source and outsourced code as part of their application development process—and therefore exposing your business to unacceptable level of unbounded corporate risk.

Join Veracode where we will discuss 5 key practices used by leading enterprises to manage application security risks that come from COTS providers, outsourcers, open source applications and crowd sourcing.

Speaker Bio

Erik Peterson

Erik Peterson is a Senior Solutions Architect for Veracode and an application and information security veteran with over 15 years of industry experience. Prior to Veracode, Erik Peterson was with Hewlett-Packard where he was Senior Director of Products for the HP Application Security Center, previously known as S.P.I. Dynamics which was acquired by HP in 2007. Erik was a member of the S.P.I. Dynamics executive team and led the product management team which defined the company's product and technology strategy.

Erik has held product leadership roles for the security information and event management company GuardedNet and the application security pioneer Sanctum, Inc. which invented the industry's first web application firewall, AppShield, which Erik managed during his tenure at Sanctum. Before entering the software industry, Erik was an information security and risk management professional within the financial industry at Moody's Investors Service in New York and SunTrust Bank in Atlanta and an IT professional for the US State Department at the U.S. Embassy in Vienna, Austria and the United Nations International Atomic Energy Agency.
